Projects Built

10+

Technologies

1+

Years Learning

I'm a passionate full-stack developer dedicated to building secure and scalable web applications. I combine strong theoretical foundations with practical problem-solving skills to deliver high-quality solutions.

My expertise spans the MERN stack (MongoDB, Express, React, Node.js) and Django, allowing me to architect complete applications from frontend interfaces to robust backend systems. I'm particularly focused on creating secure authentication mechanisms and optimizing application performance.

Currently deepening my knowledge in system design and advanced architectural patterns. I believe in continuous learning and staying updated with emerging technologies to craft better solutions for real-world problems.

Beyond coding, I love exploring new technologies, contributing to open source, and sharing knowledge with the developer community.

Skills & Technologies

My real-world expertise built through hands-on development and continuous learning
